Overview

Energy independence refers to the ability of a nation to meet its energy needs without relying heavily on energy imports. It signifies a transition towards a self-sufficient energy system that minimizes vulnerability to global energy markets and ensures greater control over energy. Energy independence is independence or autarky regarding energy resources, energy supply and/or energy generation by the energy industry. Energy dependence, in general, refers to mankind's general dependence on either primary or secondary energy for energy consumption (fuel, transport, automation. As the world grapples with the challenges of climate change, energy security, and economic stability, the concept of energy independence has taken center stage. In reality, fuel sources are globally traded. The debate over U.
