Battery Safety Engineer at HP • • Battery scientist with 8 years of experience developing and analyzing batteries and battery materials • Extensive experience analyzing in-product battery failure and reporting on root cause analysis • Routinely communicates scientific. Develop and oversee completion of a diverse set of research projects related to Li-ion battery materials. Particular focus was on the creation of high-performance organic based cathodes and electrolytes. I have had an absolute blast this. Our quality products are well-sourced to ensure they always function at optimum capacity. Our top priority is collective safety, so our batteries feature. The Moss Landing BESS fire has focused attention on safety considerations and concerns, as Aaron Marks, energy storage consultant at Clean Energy Associates (CEA), takes a closer look. Lead-acid batteries contain hydrogen-oxygen gases that can be explosive. However, issues exposed by traditional safety door locks in the winding process—such as metal contamination risks and insufficient safety levels—have gradually become. AARON batteries measures its success based solely on customer experience and satisfaction. With uncompromising standards of quality and a customer-centric, service-oriented work ethic, AARON operates on the core philosophy of 'Customer is King'.
