China has the largest solar power generation capacity

Overview

China is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. 29 -- China's combined installed capacity of wind and solar power has exceeded 1,800 gigawatts for the first time last year, as its gap with thermal power, whose primary sources are fossil fuels, continues to expand. China has more. China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1. 2 TW and pushing non-fossil power sources past thermal generation for the first time. It's a stunning visual, but it doesn't even begin to capture the staggering amount of solar power being produced by the People's Republic.
