Difference between solar container lithium battery pack C and AH

Overview

Most deep cycle batteries will tell you the Ah rating at multiple C ratings. The C rating tells you how many amp hours the battery can provide for a very specific period of time. The most common measurement of battery storage capacity is the Amp-Hour or Ah. What is an Amp-Hour?

An Amp-Hour or ampere-hour (Ah) describes battery capacity - how long will it run before. Amp-hours, or Ah, is a measure of how long a solar battery can power your home's appliances before it's completely drained. If you're considering battery storage for your solar system, you've likely come across this term as well as other measurements, such as voltage and watts. Understanding these. The C rate is a very important figure in lithium battery specifications, it is a unit used to measure the rate at which a battery is charged or discharged, also known as the charge/discharge multiplier.
