# **Differences between indoor and outdoor solar lights**

## Overview

---

Outdoor solar is built for sunlight and higher output, while indoor solar is optimized for low-light energy harvesting. Power expectations matter as much as placement. Here's the thing: both use the sun's energy, but they work completely differently. And that difference?

It can mean the gap between a light that's there when you need it versus one that's. However, the difference between indoor and outdoor lights doesn't end there. It includes variations in functionality, aesthetics, protection ratings, and more. In this blog, we'll review the crucial differences between indoor vs. Whether you're revamping your living room or designing a garden retreat, we've got you covered.
