Does industrial energy storage need to be reported to the power company

Overview

California legislation under SB 846 (Dodd, Chapter 239, Statutes of 2022) requires the CEC to expand the energy almanac report to include storage resources that serve wholesale load. SB 846 also requires the CEC to report on energy resources that serve load in the. An energy storage system (ESS) for electricity generation uses electricity (or some other energy source, such as solar-thermal energy) to charge an energy storage system or device, which is discharged to supply (generate) electricity when needed at desired levels and quality. ESSs provide a variety. Energy storage can add significant value to the industrial sector by increasing energy efficiency and decreasing greenhouse gas emissions (Mitali, Dhinakaran, and Mohamad 2022; Kabeyi and Olanrewaju 2022). Global industrial energy storage is projected to grow 2. In fact, the time is ripe for utilities to go “all in” on storage or potentially risk missing some of their decarbonization goals. ACP is committed to meeting America's national security, economic and climate. As global industries accelerate their transition toward renewable energy, the need for reliable commercial and industrial battery storage has never been greater. These technologies capture energy generated during non-peak times to be dispatched at the end of the day and into the evening as the sun sets and solar resources go.
