Does the solar photovoltaic panel film need to be removed

Overview

Yes, you absolutely must remove the protective film from your solar panels upon installation. Leaving it on will significantly reduce your panels' efficiency and can even cause permanent damage due to overheating. The film is designed solely for shipping and handling protection, and is not intended. This comprehensive guide explains the crucial difference between factory shipping films (which must be removed) and aftermarket plastic covers (which have specific valid uses). The protective film is typically applied during manufacturing to shield the panel from scratches and debris, but it must be removed before installation to ensure optimal sunlight absorption. When you decide to remove the film, do so carefully by turning off the solar light, peeling it off slowly, and disposing of it responsibly to maintain the efficiency and longevity of your outdoor solar lights.

Does the solar photovoltaic panel film need to be removed

How to remove solar protective film , NenPower

Begin to peel the film gently, ensuring a steady motion. Avoid jerky movements which can lead to tearing. If the film does tear, simply reheat the area, then use the utility knife to cut it away. If ...
