Energy storage independent power station needs frequency regulation

Overview

Pumped Hydro Storage (PHS) is a mature technology that can provide both short-term and long-term frequency regulation. Compressed Air Energy Storage (CAES) can provide long-duration frequency regulation and is often used in conjunction with other energy storage. Energy storage has emerged as a crucial component in frequency regulation, providing a flexible and responsive resource to balance supply and demand. Frequency regulation power typically depends on the system's design, where advanced battery systems can achieve rapid response.
