Environmental impact of wind solar and storage integration

Overview

This paper provides a comprehensive review of these challenges, with a focus on the critical role of energy storage systems (ESSs) in overcoming them by evaluating their technical, economic, and environmental performance. Wind and solar power plants, like all new generation facilities, will need to be integrated into the electrical power system. However, the increasing integration of large-scale intermittent RESs, such as solar photovoltaics (PVs) and wind power systems. We found that implementing solar photovoltaic, battery storage, wind, hydropower, and bioenergy can provide 504,000 jobs in 2030 and 4.
