Fastest charging ev 2023

Overview

Over the course of 2023, we executed fast-charging tests on 37 different electric vehicles. Some were less than spectacular—a Nissan Leaf added just 30 miles in 15 minutes—but the fastest-charging EVs can add more than 150 miles of range in the time it takes to use the bathroom and grab a snack. The conversation around electric vehicles often centers on range, but road trippers and EV shoppers who can't charge at home should place just as much importance on how quickly an EV recharges at a DC fast charger. So, how should we compare electric car charging times?

Given the wide disparity of data available, we have to pick one flawed measurement over another and. What is great about EVs is that the fastest-charging electric cars on the market today range from performance-oriented models to commuter cars. What is the difference between AC charging and DC fast charging?

6.
