Solar photovoltaic (PV) system feasibility studies can be a great tool if done correctly. Many clients would like to reduce their overhead by reducing energy consumption, but it's not always true. Evaluating the site and economic feasibility of a solar project is an essential step in the development process and should be completed in the initial stages, prior to preparing a system design, entering into contracts, or purchasing equipment. Site selection plays a crucial role in determining the project's viability, considering factors such as solar irradiation levels, shading, land.
