**For users in mountainous areas
the depth of the external
cabinet is 1000mm**

Overview

Mid depth racks (about 1000mm) are a good compromise. They can hold medium sized servers, PDUs, and decent airflow management. If your setup is made up of a number of components but space is really limited, these may be ideal for you. 6 mm (19") vertical mounting rails, front and rear, on depth stay. 5 Side panels, one-piece screw-fastened or two-piece with quick-release fastener, security lock and optional internal latch, for easy one-man. This cabinet provides an industry-standard 35. Standard server rack dimensions for depth would typically range between 800mm to 1200mm for full sized enterprise solutions. Smaller setups such as. 42 RU and 45 RU heights. Cabinets shall include curved perfo-rated front single hinge doors with 69% air flow rate and sp it rear perforated doors. As a rule of thumb, the maximum internal depth of a server cabinet is. The trend towards denser rack-mount servers has affected network enclosure design, resulting in a need for deeper cabinets. For instance, standard cabinets are at least 36 inches (900 mm) deep or even deeper.

For users in mountainous areas the depth of the external cabinet is is

- ✓ LIQUID/AIR COOLING
