## Overview

---

Designed and rigorously tested for high-voltage batteries reaching up to 1200 V, our HV BMS offers a complete and ISO 26262 ASIL-D compliant system solution, covering BEVs, PHEVs, FHEVs, commercial vehicles, and energy storage systems. Lately I have been investigating issues related to the 48V battery of the Mercedes Mild Hybrid system (W167 GLE/W213 E-Class). As everyone knows, when these batteries are deeply discharged, the BMS activates a software lock (DTC B183371). We named slave BMS the Battery Management Unit (BMU), which is responsible for collecting voltage, temperature, SOC, and HOC. from every cell in the pack and controllable passive balancing. We named master BMS as Rack Battery. Accurately monitors, protects and optimizes electric vehicle (EV) battery performance, revolutionizing your driving experience and energy efficiency Discover the power of Infineon's high-voltage battery management system (BMS) that reliably monitors and controls charging, discharging and cell. Advanced battery management system (BMS) solutions can help overcome the challenges affecting widespread adoption: drive range, safety concerns, reliability and cost. Especially When use a high voltage bms. 30V across 20-80% SOC) make traditional voltage-triggered passive balancing ineffective in mid-range operation.

## Active vs Passive BMS Balancing for HV Battery Packs

High voltage packs above 96V often justify active balancing for thermal safety and capacity retention. Passive balancing can still be sufficient for low-series packs with frequent full charges and tight ...
