# **How high can a rooftop photovoltaic bracket be**

## Overview

---

Solar panels should be mounted at a height of 3.25" from the roof's surface to ensure optimal performance. This measurement takes into account the seam of the SSMR, typically 1.5" to 3" in height, the mounting hardware, adding approximately  $\frac{3}{4}$ " and the module frame.

### Why Height Matters in Solar Panel Installation

When installing rooftop photovoltaic panels, the elevation is a critical factor. Discover how proper height optimization impacts solar efficiency, safety, and regulatory compliance. Learn why 18-36 inches has become the industry's golden range for rooftop PV. Mounting solar panels on a roof surface to create a solar power system is known as rooftop solar mounting. Recent research from Portland State University and the University of Utah has found that for every 1 degree.
