## Overview

---

View/Navion: This Class C comes standard with 200W solar, Group 31 batteries (or available lithium smart batteries), and a 2,000W inverter to help extend your escape. ;. To calculate the maximum size of an inverter that your car can handle, you need to determine the maximum amperage that your car's electrical system can provide. Most standard car batteries and alternators are designed to handle a limited amount of electrical load, typically around. LiFePo4 will let you use nearly all of them before permanent damage is done, but it's recommended to not let it get below 20% or so to ensure the best performance over time. Assuming you want the biggest inverter due to an expectation of a large draw, here's what your run-times look like: 1000W. A power inverter transforms the DC (Direct Current) power from your vehicle's battery into AC (Alternating Current) power, allowing you to use a wide range of electronic devices while traveling.
