# India renewable energy growth

## Overview

---

India's renewable energy output expanded at its quickest rate since 2022 during the first half of 2025, increasing by 24.43 billion kWh, based on a Reuters review of data from the federal grid. India added more than 40 GW of solar and wind capacity in 2025, while grid constraints, power contracting delays, and supply chain risks continued to affect project execution. India has seen the third-largest growth in power generation capacity in the world after China and the US. The rise of hybrid auctions, which combine wind and solar energy, accounted for over half of the auction volumes of 59 gigawatts (GW) in 2024, showcasing the market's move towards innovative energy solutions to enhance grid stability. Despite robust auction activity, actual installations lagged. India's installed renewable energy capacity is expected to increase to about 170 GW by March 2025 from the level of 135 GW as of December 2023.

\* Ministry of New and Renewable Energy targets 500 GW non-fossil-based electricity generation by 2030, as per the Prime Minister's COP26 announcement, with.

## India renewable energy growth

### India Renewable Energy Growth 2025: India adds 50GW RE capacity

...

India achieved a significant climate milestone in 2025, reaching 50% non-fossil fuel power generation capacity five years ahead of its Paris Agreement target. While major powers ...

### Renewable Energy Statistics , MINISTRY OF NEW AND ...

### India's Renewable Surge: Second-Largest Market Amid Global Growth

Among major economies, India's renewable outlook stands out. The country is poised to become the second-largest growth market for renewables, with capacity expected to increase 2.5 ...

### India's Renewable Energy

## Revolution 2024 Achievements ...

With continued policy support, increased investment, and a focus on emerging technologies, India is well-positioned to achieve its ambitious renewable energy targets and solidify ...

## India - World Energy Investment 2025 - Analysis

India has announced a range of measures to facilitate and support investment in non-fossil power generation, domestic manufacturing of key energy components such as batteries and solar PV ...

## India's Renewable Energy Drive: Progress, Bottlenecks, and Strategic

India's renewable energy sector surged to 59GW in 2024, with strong auctions and growing hybrid projects. Yet, execution lags, requiring policy enhancements to meet 2030 targets.

## India's Renewable Energy Growth: Solar Power & More ...

Explore India's growth in renewable

energy with IBEF. Dive into the growth of solar in India and other renewable energy sources shaping India's green future.

## India's 2025 renewable energy sector review: capacity growth and

India's renewable energy story in 2025 remains fundamentally positive. Capacity is scaling, costs are falling, and the ecosystem is deepening across manufacturing, storage, and new ...

## Energy Statistics India 2025: Renewable Growth, Coal Dependence

The Energy Statistics India 2025 reflects India's robust progress toward energy security, renewable transition, and higher efficiency. However, challenges remain in balancing growth with ...

## India's Renewable Energy Sees Fastest Growth in Years

Over this period, India's solar, wind and bio-energy capacities have increased fivefold, driven by robust government

policies and expanding adoption of green technologies. Solar capacity surged from just ...
