Is it okay to install photovoltaic panels on the bridge

Overview

They suit larger installations with fewer space limitations but lose more efficiency in shaded or variable-light conditions common on bridges. I usually recommend monocrystalline panels for bridges to maximize power output from limited and inconsistent sunlight. Preliminary assessments must be conducted to evaluate the structural integrity of the bridge, ensuring it can support the additional. Solar panels on bridges are a perfect example of this innovation. Factors like sunlight exposure. A bridge crossing the Pò river in San Mauro Torinese, in northern Italy, is set to host a 300m long PV system designed to rely on special mounting structures and full-black modules. An old or weak roof: You don't want to put.
