# **Is photovoltaic energy storage safe**

## Overview

---

Lead-acid batteries are the traditional choice for solar energy storage. They are reliable and cost-effective but tend to have a shorter lifespan and lower energy density than lithium-ion batteries. NFPA is keeping pace with the surge in energy storage and solar technology by undertaking initiatives including training, standards development, and research so that various stakeholders can safely embrace renewable energy sources and respond if potential new hazards arise. In this article, you will know the most important safety. Safety Features: Modern solar batteries include built-in protection systems and battery management systems (BMS) that help prevent overheating and manage charging processes effectively. Sometimes two is better than one.
