

Espay Solar Energy S.L.

Jordan energy conservation

Overview

The government of Jordan targets 10% of energy mix to come from renewables by 2020. Jordan's economy has shown steady growth at around 2.5% annually, except in 2020 due to the COVID-19 pandemic. During this period, primary energy consumption initially surged between 2015 and 2017, driven by factors such as population growth, industrial development, and urban expansion. However, Jordan has witnessed remarkable progress in renewable energy, making it one of the leading countries in the Arab world in this field, both through government projects and private initiatives. Some of these energy sources are used directly while most are transformed into fuels or electricity. Amman - Jordan is emerging as a global model for sustainable energy transition, with more than 460,000 citizens already benefiting from innovative programs spearheaded by the Energy Promotion and Consumption Efficiency Fund. In a time when economic and environmental challenges are reaching new heights, adopting this approach is not just an option, it's a necessity. In 2017, the Cabinet approved the National Green Growth Plan, which established green growth as a top national priority. Jordan's green growth vision - economic growth which is environmentally sustainable and socially inclusive - puts a strong emphasis on the importance of building resilience.
