### What Is Kinetic Energy? The Energy of Motion Explained

Cars, planes, and trains all convert chemical potential energy (fuel) into kinetic energy to move. And when they need to stop, that kinetic energy must be absorbed or redirected--often ...

## Kinetic Energy

The energy of motion is called kinetic energy. It can be computed using the equation  $K = \frac{1}{2}mv^2$  where  $m$  is mass and  $v$  is speed.

## Kinetic Energy - Lesson Summary , Good Science

Kinetic energy refers to any active form of energy. Kinetic energy involves movement of whole objects, movement of particles within objects or waves generated by objects.
