

Espay Solar Energy S.L.

London energy transition

Overview

Co-organized by the UK government and the International Energy Agency (IEA), the summit convened over 60 nations to deliberate on the evolving landscape of energy security amidst geopolitical tensions, technological advancements, and the pressing need for climate action. The global energy transition has reached a strategic crossroads. While record investments continue to accelerate renewable deployment, the pathway to net-zero is becoming more fragmented, more contested, and more complex to navigate. Rising geopolitical instability is redrawing global energy flows. This is where energy meets AI: from powering data centres to enabling autonomous grids. OXFORD (AURORA ENERGY RESEARCH)—Aurora Energy Research is proud to announce its first Aurora Energy Transition Summit, taking place in London on 19 November 2025. This year's ETF was attended by more senior participants than ever before, including senior representatives and CEOs; government and regulatory authorities from the U. This event will consolidate Aurora's.
