# **Microgrid System Engineering Case Study**

## Overview

---

This section of the wiki features a compilation of microgrid case studies, showcasing some important applications for energy storage. It will incorporate 20 buildings across the Clayton campus comprising 3.5 MW of demand, 1 MW of Solar photovoltaics, 1 MWh of battery storage, and 2 EV charging stations. Each analysis presented in this report is grounded in actual case studies conducted by EPRI. These case studies combine the Storage Value Estimation Tool, Alencon's String Power Optimizer and Transmitters (SPOTs) connect solar to battery energy storage in a DC microgrid that supports the operations of the Mbogo Valley Tea Factory. This is achieved by integrating state-of-the-art protection, automation, and control schemes along with.
