# **Photovoltaic group of several panels**

## Overview

---

A photovoltaic array is the complete power-generating unit, consisting of any number of PV modules and panels. Photovoltaic modules consist of PV cell circuits sealed in an environmentally protective laminate, and are the fundamental building blocks of PV systems. A solar array is a group of solar panels connected together as part of your home solar system. In this guide, you'll learn what exactly a solar array is, how it differs from a single panel, and how to determine the right array size based on your location, roof conditions, and household energy. How many photovoltaic solar panels are considered a group?

Photovoltaic solar panels are typically grouped based on their configuration and capacity, and a collective grouping often consists of 1. common installation practices, and 3. PV cells are made of materials that produce excited electrons when exposed to light. The term can also refer to a similar set of reflecting mirrors used for directing and focusing.
