Photovoltaic panels are so easy to break

Overview

The quick answer to this question is no. Solar panels do not break often, and they are designed to be extremely durable and hardy. In fact, some solar panels that were installed in the 80's are still operating! Even during extreme weather events, solar panels will hold up extremely. Solar panels can save money, energy, and frustration, but they're not a perfect solution to home energy needs. Still, you should know the reasons why they break, how to help prevent breakages, and what to do if it happens. Why has solar panel breakage increased?

Renewable Energy Test Center (RETC) reports an increase in solar panel glass breaking in the field, sometimes even before the PV modules are commissioned. At the National Renewable Energy Laboratory (NREL) in Golden, Colorado, teams of scientists and researchers spend large parts of their day jumping on, twisting, smashing, and generally coming up with various ways of breaking solar panels. It's not malice, it's not incompetence.
