## Overview

Peeter: The maximum array size on installs can be up to the limits you describe, though for larger arrays the maximum size is more normally limited by practical considerations such as available space or cost. Those two ratings of the PV array must not exceed these MPPT. Plane of Array Irradiance, the sum of direct, diffuse, and ground-reflected irradiance incident upon an inclined surface parallel to the plane of the modules in the photovoltaic array, also known as POA Irradiance and expressed in units of W/m<sup>2</sup>. Performance Ratio based on measured production. Did you know that even a 0.5% annual efficiency drop could erase 12% of your ROI over 25 years?

Photovoltaic panel attenuation – that gradual power output decline we often ignore – is actually the #1 profitability killer in solar energy systems. Let's cut through the technical jargon and reveal. Measuring solar photovoltaic attenuation involves a systematic approach to assess the decrease in efficiency of solar panels over time due to various factors. Here are the key points of consideration: 1. Like that gym membership you never use, their performance naturally degrades over time.
