Power Distribution for Photovoltaic Energy Storage Battery Cabinets on Oil Platforms

Overview

In this study, the allocation and sizing strategies of a battery energy-storage system (BESS) in an optimal way are proposed to improve the performance of the radial distribution networks. The study explains the current practice and assesses challenges, of existing off-grid PV installations at similar platforms. The test network adopted is a standard IEEE 33 bus network that is integrated with solar power. Simulations. Can a battery-integrated solar PV system support an offshore environment?

Although the LCOEs of the designed battery-integrated system were found to be higher than a typical on-grid solar PV system commonly installed over lakes or dams to support a national energy portfolio, an offshore environment. Most industrial off-grid solar power systems, such as those used in the oil & gas patch and in traffic control systems, use a battery or multiple batteries that need a place to live, sheltered from the elements and kept dry and secure.
