

**Espay Solar Energy S.L.**

# **Renewable energy growth mongolia**

## Overview

---

Mongolia has abundant renewable energy potential, especially solar and wind power. Addressing national energy security, the Vision-2050 aims to become self-sufficient in energy production in the first stage, reduce coal-sourced energy, and in the second stage to become an exporter. Mongolia has 3% of the total installed capacity. Here, we discuss legislation and financing for renewable energy sources, as well as regulation regarding the social and environmental impacts of renewable energy projects. We also give an overview of institutions and civil society stakeholders. Traditionally dependent on coal, the country is now making significant strides towards a cleaner, more sustainable future, thanks in large part to strategic investments from the European Bank for Reconstruction and Development (EBRD).

## Renewable energy growth mongolia
