# Size of Bern Solar System

## Overview

---

Venus - Venus has a radius of approximately 6,052 km (3,761 mi) and a diameter of about 12,104 km (7,521 mi). It's almost the same size as Earth, at about 0. This article includes a list of the most massive known objects of the Solar System and partial lists of smaller objects by observed mean radius. Let's explore the sizes of the planets, including their radius and diameter in both kilometers and miles, and. This is a simple guide to the sizes of planets based on the equatorial diameter - or width - at the equator of each planet. The four outer planets are Jupiter, Saturn, Neptune, and Uranus, giant planets that consist mainly of either gases or ice.

## Size of Bern Solar System

---

### Solar System

The Solar System currently moves through a cloud of interstellar medium called the Local Cloud. The closest star to the Solar System, Proxima Centauri, is 269,000 AU (4.25 ly) away. Both are within the ...

---

### Solar system , Definition, Planets, Diagram, Videos, & Facts , Britannica

Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own satellites; ...

---

### Solar system , Definition, Planets, Diagram, Videos, & Facts , Britannica

Neptune, often described as Uranus's "twin planet" due to their many similar characteristics, is also very close in size to Uranus. Neptune is 49,248 km in diameter, making Uranus only 1.3 times larger in ...

## Planets Sizes in the solar system

Saturn is the second largest planet in our solar system with a diameter of 120,660 km and a mass of 5.6846 (1026). Saturn is 1,427 million km from the Sun and features a large ring comprised of space ...

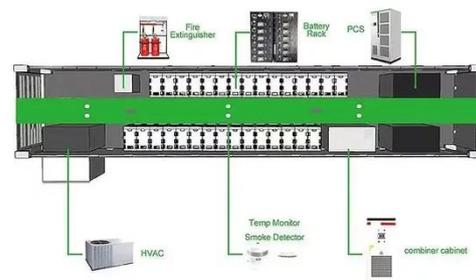

## Size of Planets in Order

Neptune, often described as Uranus's "twin planet" due to their many similar characteristics, is also very close in size to Uranus. Neptune is 49,248 km in diameter, making Uranus only 1.3 times larger in ...

## How big is the Solar System?

The scale of our Solar System is gigantic. There's more to our cosmic neighbourhood than eight planets and an asteroid belt.

## Size of Planets in Order

The size of planets in our solar system varies dramatically. Let's explore the sizes of the planets, including their radius and diameter in both kilometers and miles, and their relative sizes ...

## Solar System Facts

Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and comets. Our solar system is located in the Milky ...

## List of Solar System objects by size

These lists contain the Sun, the planets, dwarf planets, many of the larger small Solar System bodies (which includes the asteroids), all named natural satellites, and a number of smaller objects of ...

## Planet Sizes and Locations in Our Solar System

Our solar system has eight planets, and five officially recognized dwarf planets. Which planet is biggest? Which is smallest? What is the order of the

planets as we move out from the Sun? ...

### Solar system guide

Discover the order of planets in the solar system. From Mercury to Neptune, explore our solar system and learn more about our cosmic home.
