# **Solar energy for homes chile**

## Overview

---

Under current market conditions, residential solar is not economically viable in Chile. Solar power in Chile is an increasingly important source of energy. [1] In 2024, Solar energy provided 19.3% of total national electricity grid generation. Chile stands as a global beacon for solar energy, boasting the world's highest solar irradiance in its Atacama Desert. " All renewable energy projects, including utility-scale solar power plants, are eligible for tax exemptions until 2035, with solar PV projects receiving up to 15 years of tax relief. Through financial modeling, we analyzed potential paths toward viability through four different drivers that would reduce payback period and increase IRR. Through financial modeling, we analyzed the impact of. According to a report from pv magazine LatAm, Chile added 1,127 MW of photovoltaic capacity last year, raising its cumulative installed solar capacity to 11,634 MW. The Atacama Desert in the north, one of the driest and sunniest places on Earth, leads the way, while central and southern regions offer solid, if lesser.
