Solar lights are on but do not generate electricity

Overview

Faulty light sensors can prevent solar lights from turning on; cleaning the sensor, checking its position, and adjusting settings may resolve this. Let's get your solar light back on. To start, if your new solar light isn't working, check and remove the pull tab on the battery, which prevents discharge during shipping. The lifespan of solar lights' rechargeable batteries is typically 300-500 charges, and a decrease in light duration can. According to the National Renewable Energy Laboratory (NREL), solar systems typically operate with over 95% reliability, meaning issues are usually preventable or easily diagnosed. Double-check the on/off switch, assess the solar. But if they don't automatically turn on like they used to, you're probably wondering why your solar lights are not working.

Solar lights are on but do not generate electricity
