# **Solar panels generate electricity without batteries**

## Overview

---

Yes, solar panels can operate without a battery system. They generate electricity when exposed to sunlight, and this electricity can be used directly. This leads to a common question: Can I install solar without in-home battery storage?

The short answer is yes: You can absolutely use solar panels without battery storage. In fact, the majority of residential solar installations in the U. are “grid-tied” systems without batteries (although solar. Photovoltaic (PV) modules convert sunlight into direct current (DC) via the photovoltaic effect. When photons hit the semiconductor junction, electrons move and create DC power—this is the raw output of your array. Whether you're just curious or planning to install your own system, this easy-to-understand guide walks you through everything you need to know, including.
