

**Espay Solar Energy S.L.**

# **Solar panels installed on the roof and paid**

## Overview

---

The cost of replacing a roof and installing solar panels simultaneously is a significant investment for most homeowners. As the construction industry contributes significantly to global greenhouse gas emissions, integrating solar technology during roof replacement is a smart move towards more. Solar Costs Have Reached Historic Lows: Average residential solar costs have dropped to \$3.30 per watt in 2025, representing a 60% decrease from 2010 levels. Combined with the 30% federal tax credit extended through 2032, most homeowners can achieve payback periods of 6-12 years with 25+. Solar panels can lower your electricity bill by 75% or more, but the upfront investment is significant. Most homeowners spend between \$12,600 and \$33,376 to install a complete residential solar system in 2026, with the national average at \$19,873 before incentives. System size, panel type, and labor needs are the biggest cost drivers, along with your roof's condition and any upgrades.
