

Espay Solar Energy S.L.

Solar photovoltaic power generation for apartment buildings

Overview

Most multi-family buildings can be powered with 100% solar energy, however the number of solar panels needed will vary depending on your property's square footage. Generally, a small or average-sized apartment building will require 500-1000 watts of solar PV capacity. If you live in an apartment, you can still receive the benefits of solar generators, including reduced utility costs and less reliance on the grid. With power outages becoming increasingly common across the nation, these compact solar generators and portable power stations are becoming necessary no. While photovoltaic (PV) solar panels are commonly associated with stand-alone homes, many apartment buildings are beginning to realize the advantages of solar as well. When the power of the sun is harnessed for energy, it doesn't produce the fossil fuel emissions like electric power does. With several affordable government incentives, solar power is becoming more and more attractive.
