## Overview

---

A solar-powered well pump uses photovoltaic (PV) panels to convert sunlight into electricity, which powers a pump to extract water from a well. These systems can be paired with jet pumps for shallow wells (less than 25 feet) or submersible pumps for deeper wells (25 to 400 feet or more). If you rely on a well for water, switching to solar power for your well pump can be a smart, eco-friendly choice. Solar powered water pumps. Can solar actually run a well pump without cutting out?

The answer is yes. But only if your system is sized properly. In this article, we'll break down how solar can power your well pump reliably, what it takes to size your setup correctly, and why it's becoming more popular among rural areas. As renewable energy adoption accelerates, the solar pump has emerged as a practical and efficient solution for long-term water management.
