## Overview

---

These reports benefit the greater scientific community by enabling the findings to inform other research happening across the country, both within and outside of the government. Department of Energy (DOE) Solar Energy Technologies Office (SETO) funds competitive research and development projects in three technology areas: photovoltaics (PV), concentrating solar-thermal power (CSP), and systems integration with the goal of improving the affordability, reliability. Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat water for domestic uses, to warm buildings, or heat fluids to drive electricity-generating turbines. Solar. Solar energy is environmentally friendly technology, a great energy supply and one of the most significant renewable and green energy sources. It plays a substantial role in achieving sustainable development energy solutions. Solar energy stands out as a favorable solution in terms of abundant availability, scalability, and minimal environmental effect.
