

Espay Solar Energy S.L.

Solar-powered container exchange at port terminals

PUSUNG-R (Fit for 19 inch cabinet)

Overview

Installing solar panels or small wind turbines on terminal property helps terminals produce the clean energy they consume: Even 1-2% on-site solar, when scaled, can significantly reduce dependency on grid electricity. Coupled with battery storage, renewables support. The Port Authority of New York and New Jersey, Port Newark Container Terminal (PNCT) and the city of Newark today announced the completion of a 7.2 megawatt (MW) solar installation at PNCT. Support CleanTechnica's work through a Substack subscription or on Stripe. 2-MW solar project engineered to integrate with the operational complexity of an active marine terminal in Newark, New Jersey. The project delivers clean energy using rooftop and canopy systems without disrupting port. The project supports PNCT's mission toward a net-zero energy microgrid and PANYNJ's commitment to reaching net-zero carbon emissions by 2050.

Solar-powered container exchange at port terminals

Standard Solar Delivers 7.2 MW System at Port Newark Container Terminal

Built across the 320-acre terminal, the installation also has the capacity to send excess power to the Newark grid, supporting local energy resilience and emissions reduction.

Port Newark Container Terminal Solar Facility

Completion of the solar project marks PNCT as the only global port to successfully integrate a large-scale solar facility directly into its active operational footprint.

Highvoltage Battery

Harnessing Renewable Energy in Container Terminals

Learn how terminals are embracing renewable energy, highlighting solar, wind, electrification & grid resilience with LBCT.

If They Can Put Solar Power Here,

They Can Put It Anywhere

At the Port Newark Container Terminal in New Jersey, solar panels have been shoehorned into a tightly packed, high-traffic shipping facility, without disrupting operations or taking up

Port Newark Container Terminal Completes 7.2 MW Solar Installation

The Port Authority of New York and New Jersey, in partnership with Port Newark Container Terminal (PNCT) and the city of Newark, has completed a 7.2 megawatt solar installation at the terminal.

Newark port completes 7.2-megawatt solar installation

The solar system spans 7.8 acres through elevated canopy structures over truck lanes and parking areas, offering an efficient, dual-use design that maximizes energy output without ...

NEW SOLAR ENERGY INSTALLATION AT EAST COAST'S ...

"By working hand-in-hand with PNCT and the city of Newark, our seaport is now home to a large solar energy project

capable of generating significant energy for one of its major container ...

Standard Solar builds 7.2-MW solar project at active New Jersey

Standard Solar and Port Newark Container Terminal (PNCT) have completed a 7.2-MW solar project engineered to integrate with the operational complexity of an active marine terminal in ...

Port Newark solar project now powers 50% of terminal (photos)

"By working hand-in-hand with PNCT and the city of Newark, our seaport is now home to a large solar energy project capable of generating significant energy for one of its major container

Major East coast shipping port installs rooftop and truck lane canopy solar

Standard Solar installed the project, which is made of rooftop installations

and solar canopy systems to avoid taking up ground space in the bustling port. The project provides approximately
