# **Stacked solar container battery plug-in structure**

## Overview

---

Stacked energy storage systems utilize modular design and are divided into two specifications: parallel and series. They increase the voltage and capacity of the system by connecting battery modules in series and parallel, and expand the capacity by parallel connecting multiple. Think of modular batteries as Lego for energy storage. They're made up of stackable or connectable units, so you can start with the basics and add more when you need extra capacity. No need to buy a massive, expensive battery from the get-go—just grow your system as your energy needs grow. Rather than relying on a single, bulky battery unit, these systems integrate multiple smaller battery modules, which are either physically or electrically stacked to achieve the desired. BESS containers are more than just energy storage solutions, they are integral components for efficient, reliable, and sustainable energy management. Each cell contributes to.
