Swiss new energy storage policy

Overview

Switzerland is expanding rules for rooftop solar, energy storage, and energy communities to expand self-consumption and ease pressure on the grid. The new regulations, set to take effect in 2026, introduce updated tariffs, encourage battery storage, and allow local electricity trading. Batteries can store electricity, especially when generation is high and demand is low. For our society, this. In order to deal with the challenges facing the country now and going forward, we need to create conditions that allow us to, increase domestic electricity production rapidly. electrify/decarbonise energy supply to a large extent and continuously improve the efficient use of energy. However, according to a report by the Swiss Academies of Arts and Sciences, there is a lack of clear political and regulatory guidelines for expanding them on a large scale in Switzerland. Keystone-SDA +Get the most important news from. As is the case with several other countries, Switzerland's climate policy towards a climate neutral energy policy (Energy Strategy 2050) makes the transition from the existing use of several types of energy (fossil, nuclear, renewable, etc) challenging.
