# **The current status of domestic development of microgrids**

## Overview

---

It summarizes the current state of the microgrid industry and its standardization landscape, outlines emerging trends that will shape the industry, and identifies the challenges that are impeding microgrid deployment. The current status of domestic smart microgrid development and procedural rollout of microgrids in the United States are considered as a subsystem or a microgrid. The primary objective for the installation of microgrids is the integration of blockchain technology. Blockchain is a decentralized digital ledger that. This study presents a comprehensive review of microgrid systems within the U.S. energy infrastructure, focusing on decentralized energy solutions and their regional implementation. The primary objective is to explore the evolution, current state, and future prospects of microgrid technologies. The conventional power grids are now obsolete since it is difficult to protect and operate numerous interconnected distributed generators. A proper investigation of microgrid architectures is presented in this work. Microgrids: The evolution of electrical infrastructure. 5 times, bringing total to 32,470 MW by 2030.
