The photovoltaic panel is installed upside down

Overview

While you can mount solar panels upside down, and while people have done it before, you should probably avoid mounting solar panels upside down unless the manufacturer specifically instructs you to do so. When the cover is unfolded and locked, the center section is facing down. I'm thinking that the mounting of a panel on the bottom of the center section would serve several. Solar panels can be installed in various orientations depending on the roof type, available space, and specific energy needs. Vertical (Portrait) Orientation: The longer side of the panel runs up and down. In the US, panels are generally installed vertically by default unless you have a flat roof which better allows for horizontal panels since they won't protrude as much. Many homeowners wonder – can I mount. The answer is yes, it does matter.
