# **The photovoltaic panel wires are exposed**

## Overview

---

Most solar system failures start with wiring issues. The wires carry high voltage, often across exposed areas like rooftops, exterior walls, or open fields. A poorly planned wiring layout can lead to real trouble: water damage, accidental contact, or even fire. Neatly concealed, well-protected wiring is not just about looks. It's about safety, efficiency, and long-term performance. If you're planning your own system or reviewing a contractor's work. Connecting the exposed wires of solar panels involves several key steps to maintain safety and efficiency. At least some of these standard grades of ties fail well before the useful life of the solar PV system.
