

What energy storage does photovoltaic need

Overview

Solar energy storage is crucial for making the most of solar power, providing energy even when the sun is not out. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. And it is precisely this ability to "store the sun" that is making storage a valuable ally for those seeking energy. The best way to store solar energy depends on your household's energy needs, budget, and whether you're connected to the grid.
