What size is suitable for photovoltaic panel wiring

Overview

The most commonly used wire gauge connecting solar panels is 10 AWG. Why 10-American-Wire-Gauge (AWG) is selected as the standard for external connection of solar arrays due to the following: Consider water flowing through a hosepipe. The bigger the diameter of the hose, the easier. Proper solar panel wire sizing is critical for system safety, efficiency, and compliance with electrical codes. Using undersized wire in your solar installation can result in dangerous overheating, significant energy losses from voltage drop, and costly equipment failures. If the solar array pushes too much electrical current through too thin of a wire, the metal conductors get hot and can melt the outer insulation, which becomes a dangerous fire hazard. Results are approximations only and may not meet all local electrical codes, inspection requirements, or manufacturer specifications.
