Wheel wind turbine blades

Overview

Wind turbine blades are the aerodynamic structures that extract kinetic energy from moving air. The overall goal of our project was to gain an understanding of wind turbine blades sufficient to develop Figures of Merit analyzing the tradeoffs between structure, material, cost, and other qualities in order to optimize the design of a large wind turbine blade. Due to the size of emergent. If you're fascinated by renewable energy—whether you're just starting to explore or are an electrical engineer seeking a deeper dive—understanding the latest innovations in wind turbine blade design is key to appreciating how wind energy is evolving.
