# **Which type of equipment is an uninterruptible power supply**

## Overview

---

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails. Energy Storage: UPS systems use batteries, flywheels, or supercapacitors to store energy for use during power interruptions. Unlike a generator, there's no waiting—it just takes over, so computers, servers, and other gear keep humming. In this blog, we'll explore the different types of uninterruptible power supply systems, how they differ in operations, and the levels of protection they provide your critical load.
