Why are photovoltaic panels placed high above the ground

Overview

Increased Elevation: Panels are mounted higher above the ground or roof surface, which can help reduce shading from nearby objects and improve airflow. Depending on the height of the solar roof mounting system to be installed, it is classified as follows: In this solar structure, panels are mounted on the rooftop with a ground clearance of fewer than 1m, at the lowest point of the panel. This is the structure with the least amount of metal. Ground-mounted solar panels are typically installed at a height that balances efficiency with practicality. The average height generally ranges from 3 to 5 feet above the ground. In 2023 alone, elevated solar installations grew by 18% according to the Renewable Tech Monitor, outpacing traditional ground-mounted systems. On top of being an alternative to rooftop solar, ground-mounted solar systems can be used on farms, in your garden, and more! In this article, we'll explain what a. Highrise or Elevated Solar Mounting Structures: Designed for installations that require higher elevation, such as over parking lots, agricultural fields, and industrial rooftops where shading and space utilization are critical considerations. What is a Standard Solar Mounting Structure?
